

Truthcoin

Blockchain InTrade / “Bitcoin 2.0”

Needs Backers and Advisors

As Seen On:

1. [Y Combinator Hacker News](#)
(#1 story weekend of May 3rd)
2. [Let's Talk Bitcoin](#)
(Episode 117 “Truth Matrix”)
3. [NYC BitDevs Meetup](#)
(September 9 Headline Presenter)

Problem: Blockchains are ignorant of 'real world' data.

- Biggest BTC Complaints:
 - “**No intrinsic value**” (can't use it unless someone else wants it).
 - Price **too volatile** (poor value-storage).
- I study 'prediction markets' & 'mechanism design'.
- Used some game-theory to design *a system which grabs accurate reports from people* even if 100% of them are untrustworthy and motivated to lie.

How is Truthcoin Different?

Network-Effect, Simpler, Stronger

Others

Must switch to new coin.

New/Risky ...computer science, security, or business model.

If core idea fails, entire system collapses.

Smart contracts by “doing the computation”.

Do not solve “external data problem” in secure/scalable way.

My Design

Maintains the ownership network-effect by **profitably** giving away coins to BTC Owners (100% adoption)!

Exactly the same everything as Bitcoin, but with a few more transaction types and data structures.

A user can safely ignore all 2.0 features. Talebian robustness: fail safely and often.

Smart contracts by “asking for the answer”.

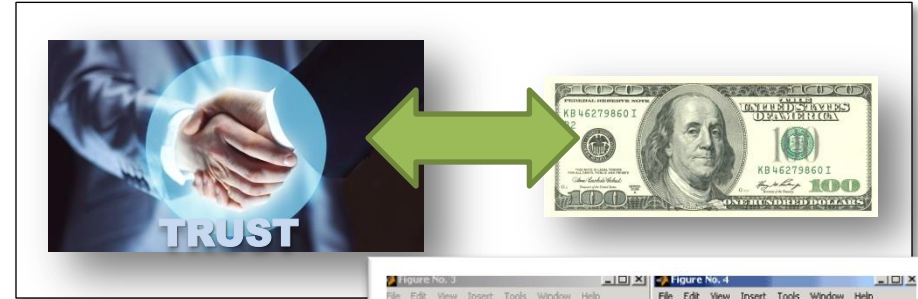

Problem solved!

How it Works

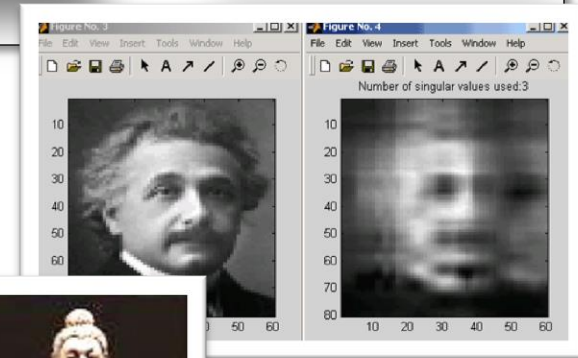

1) Tradable Reputation

- Abstract corporation which exists to prove its consistency within and across time.
- Collects \$ to power the mechanism.

2) SVD Cross-Validation

- Statistical technique: seeks importance.
- Gleans truth, measures conformity.

3) Strategic Use of Time

- Funds can be 'locked' across time.
- Yet info-search-costs constantly fall.
- Net effect: time penalizes attackers only.

4) "Talebian" Robustness

- "Fail quickly and safely" (instead of "we never fail").
- Lying-Voters, Voter-Cartels, and Monopolist-Voters can each **help (not hurt)**, up to a certain (high) point.

Ethereum Crowdsale

ethereum

1. Revenue Model / Developer Kickbacks: Post-development, **auction** off the "VoteCoins" (which earn $\frac{1}{2}$ of trading fees).
2. Compare to (Ethereum, NXT):
 1. Must defy Bitcoin and its network.
 2. Require a confused initial-distribution, open to immediate hard-forks.

* Per year, taking $\frac{1}{2}$ of 5 basis points (0.0005), NPV of 3 years at 45% discount rate (see [valuation](#)).

Team

Paul Sztorc

Formal training in economics, psychology, math, statistics, and finance.

Lifelong passion for prediction markets.

Ruthlessly strategic and paranoid.

Talented, hardworking volunteers from around the world!

(No official organization).

Needed:

- Marketing
 - Optimistic (non-scientist) 'salesman-type' promoters
 - A "Big Name" endorsement (Byrne / Draper / Ver)
- Consultants (Bitcoin devs, academic cryptographers)
- Managerial / Legal / Administrative Infrastructure
